

Dear Customer

MKS TECHNICAL BULLETIN: Specification change of BM-7 copper plated plate

- The surface treatment of the aluminium side plates used in the silver SYLVAN NEXT series will be changed. There are no changes to the body, shaft, or other parts.
- Previously treated with chrome plating, it is now silver-coloured anodised (right photo).
- Anodization, also known as anodic oxidation treatment, is a surface treatment in which an oxide film is generated on the surface of aluminum by electrolytic treatment with an anode. It contributes to corrosion and wear resistance.
- As soon as the stock of the old specification runs out, the changeover will be applied as a running change. Each supplier will be notified individually at the time of shipment when the changeover will be applied.
- The following eight products are covered by the switchover. (Also includes One Side Ezy).

SYLVAN TOURING NEXT Ezy Superior Silver	4560369004317
SYLVAN ROAD NEXT Ezy Superior Silver	4560369004348
SYLVAN TRACK NEXT Ezy Superior Silver	4560369004362
SYLVAN STREAM NEXT Ezy Superior Silver	4560369004430
SYLVAN TOURING NEXT Silver	4560369004300
SYLVAN ROAD NEXT Silver	4560369004331
SYLVAN TRACK NEXT Silver	4560369004355
